

Q11 A system needs to search for specific records in a large dataset efficiently. Construct a concept map linking Searching Algorithm → Linear Search → Binary Search → Time Complexity → Efficiency. Include relationships that compare the number of operations and performance of each method. Analyze which algorithm is more efficient and justify your conclusion.

Q27. A payroll system processes employee salaries sequentially. Construct a concept map connecting Array → Sequential Access → Processing → Efficiency → Limitations. Explain how sequential processing works and justify its advantages.
